PRESS RELEASE

Kochi, November 26, 2026

Kings Infra Ventures Limited Signs ₹311 Crore MoU with Government of Tamil Nadu for Integrated Aquaculture and Food Processing Project

We are pleased to announce a significant milestone in the Company's growth journey, as Kings Infra Ventures Limited has signed a Memorandum of Understanding (MoU) with the Government of Tamil Nadu on November 25, 2026, envisaging a proposed investment of ₹311 Crore towards the development of an integrated aquaculture and food processing infrastructure project in Thoothukudi District, Tamil Nadu.

The MoU was signed during the second edition of the VETTRI – Tamil Nadu Investment and Conversion Conclave, held at Mahabalipuram, near Chennai, in the presence of the Hon'ble Chief Minister of Tamil Nadu, Hon’ble Minister for Industries, Investment Promotion and Commerce and other distinguished dignitaries.

The proposed project will be developed on approximately 126 acres of land owned by the Company at Thoothukudi, Tamil Nadu. It envisages the establishment of an integrated aquaculture technology park incorporating advanced aquaculture systems, modern food processing facilities and allied infrastructure.

The project entails a proposed investment of ₹311 Crore and is expected to contribute regional economic development and strengthening Tamil Nadu's position as a destination for aquaculture and seafood processing industries.

This initiative builds upon the Company's ongoing efforts in sustainable aquaculture, Recirculating Aquaculture Systems (RAS), advanced farming technologies and value-added seafood processing. The Detailed Project Report (DPR) for the proposed integrated aquaculture technology park had already been prepared, and the project was reported to be technically ready for implementation in the Company's disclosure to the Stock Exchanges dated November 13, 2026.

The proposed project is envisioned as a comprehensive aquaculture technology park, facilitating a gradual transition from conventional earthen pond-based aquaculture to advanced tank-based Recirculating Aquaculture System (RAS) technology. The RAS-based model is expected to significantly reduce land and water requirements while enabling approximately four to five times higher productivity and four to six production cycles annually, compared to around two cycles under conventional farming practices.

The Company is also in discussions with international technology providers to source advanced aquaculture technologies and adapt them to Indian conditions. The proposed development will include nursery facilities to ensure a consistent supply of quality seed, along with hatchery facilities, feed mills, a marine biorefinery, seafood processing facilities and other supporting infrastructure.

Following the receipt of the requisite governmental approvals, the Company proposes to develop and operate the RAS aquaculture facilities and associated infrastructure in collaboration with international technology partners. The project is also designed to encourage wider participation from entrepreneurs

and investors, with individual tanks functioning as independent operational units within the technology park.

In addition to its infrastructure development objectives, the project is expected to create opportunities for the Company to leverage its technical expertise through project development and management consultancy services. The Company has already received enquiries from overseas companies interested in such technical and consultancy support.

The project will initially be implemented through a commercial-scale demonstration phase, subject to the necessary governmental approvals, to establish the operational feasibility of advanced RAS technology under Indian conditions. Upon successful implementation of the demonstration phase, the remaining project area is proposed to be developed in a phased manner through strategic partnerships with established commercial participants.

The Company believes that the proposed initiative will create a scalable and technology-driven aquaculture ecosystem, strengthen India's seafood production and processing capabilities, promote sustainable farming practices and position Tamil Nadu as an emerging hub for advanced aquaculture technologies.

The Company believes that this initiative will further strengthen its integrated aquaculture business model, enhance its production and processing capabilities, generate substantial employment opportunities and contribute to the growth of India's seafood and food processing.

About Kings Infra Ventures Limited

Kings Infra Ventures Limited is an integrated aquaculture and seafood company engaged in aquaculture production, seafood processing, exports and the development of advanced aquaculture technologies. It focuses on sustainable practices, technological innovation and value-added seafood products to strengthen India's position in the global seafood industry.

The MoU signing ceremony was held in the presence of Hon'ble Chief Minister of Tamil Nadu, Shri. C. Joseph Vijay; Industries Minister Ms. S. Keerthana; Mr. Deepak Jacob, Managing Director and CEO of Guidance Tamil Nadu and other senior Government officials. Representing Kings Infra Ventures Ltd. were CA Dr. Binoy J. Kattadiyil, Vice Chairman and Director, and Mr. Balagopal Veliyath, Executive Director
