Subject: Expansion of Product Portfolio – Exploring Entry into the Corrosion Resistant Steel (CRS) TMT Bars Market

Pursuant to Regulation 30 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please take note that the Company is presently engaged in the manufacturing of Thermo Mechanically Treated (TMT) Bars, including Fe500 grade TMT Bars. The Company has recently obtained the requisite Bureau of Indian Standards (BIS) licence for manufacturing Fe500D, Fe550 and Fe550D grade Thermo Mechanically Treated (TMT) Bars, thereby further strengthening its product portfolio.

Entry into CRS TMT Bars – A New Growth Opportunity

As part of its strategy to diversify its product portfolio and tap new market opportunities, the Company has identified an opportunity to explore the manufacturing of Corrosion Resistant Steel (CRS) TMT Bars, a specialised value-added product designed to provide enhanced resistance to corrosion.

CRS TMT Bars are particularly suitable for applications exposed to coastal, marine and other corrosive environments, including infrastructure and construction projects where enhanced durability and longer service life are important considerations.

Key Benefits of CRS TMT Bars

- **Enhanced Corrosion Resistance** – Provides superior resistance to corrosion, particularly in coastal and harsh environments.
- **Longer Service Life** – Enhances durability and extends the service life of reinforced concrete structures.
- **Reduced Maintenance** – Helps reduce corrosion-related repairs and maintenance requirements.
- **Wider Applications** – Suitable for bridges, ports, marine structures, coastal infrastructure and other critical projects exposed to corrosive conditions.

Business and Growth Potential

The proposed entry into the CRS TMT Bars segment is expected to be a significant growth opportunity for the Company, enabling it to tap into a new and specialised market with substantial potential, broaden its customer base and substantially expand its addressable market. The addition of this value-added product is expected to open up new avenues for business expansion, increased sales volumes and enhanced revenue potential, while strengthening the Company's product portfolio, competitive positioning and long-term growth prospects.

Steps to be undertaken by the Company

The Company has accordingly initiated preliminary steps towards evaluating the feasibility of manufacturing CRS TMT Bars, including exploring suitable technology tie-ups and undertaking the requisite statutory, regulatory and government registrations/approvals, as may be applicable.

The Company will undertake further steps in this regard based on the outcome of the technical and commercial evaluation, feasibility assessment and applicable regulatory requirements.

The above information is being submitted for the information of the shareholders.

Kindly take the same on your records.

Thanking you.
