Dear Sir/Madam,

Subject: Press Release

Pursuant to applicable provisions of SEBI (Listing Obligations & Disclosure Requirements) Regulations, 2015, as amended, please find enclosed press release of the Company announcing that “Coforge launches AI-powered SecureEdge2Cloud, a Zero Trust offering built on Zscaler Platform”

We request you to take the above on record.

For Coforge Limited

**Barkha Sharma
Company Secretary & Compliance Officer**

Encl.: As above

Coforge launches AI-powered SecureEdge2Cloud, a Zero Trust offering built on Zscaler Platform

Reimagining enterprise security with AI, Zero Trust, and a unified edge-to-cloud framework for secure digital transformation

Greater Noida, India/Princeton, NJ, USA – Thursday, July 9, 2026 - [Coforge Limited](#) (NSE: COFORGE), an AI-native engineering services leader, today announced the launch of SecureEdge2Cloud, a next-generation AI-powered, Zero Trust security offering built on the **Zscaler Zero Trust Exchange™ platform**. The offering enables organizations across industries to securely accelerate digital transformation, strengthen cyber resilience, and confidently adopt cloud, AI, and modern digital technologies.

Coforge was recently onboarded into the next phase of Zscaler's Project AI-Guardian, expanding ecosystem collaboration and strengthening interoperability across the Zscaler Zero Trust Exchange platform and its AI security portfolio.

Addressing a Critical Enterprise Security Challenge

Organizations today operate in increasingly complex digital environments where users, applications, data, devices, and AI agents are distributed across cloud, on-premises, and hybrid infrastructures. As enterprises accelerate AI adoption and connect more ecosystems through partners, suppliers, contractors, and third-party platforms, traditional perimeter-based security models are becoming ineffective.

At the same time, cyber threats continue to evolve in sophistication, targeting sensitive business data, intellectual property, customer information, and critical operational systems. Security teams are challenged by fragmented architectures, growing attack surfaces, shadow IT, unmanaged devices, and increasingly stringent regulatory and compliance requirements.

To stay ahead, enterprises need a modern security architecture that delivers visibility, simplifies operations, reduces risk, and protects users, applications, and data regardless of location.

A Unified Zero Trust Approach for the Modern Enterprise

SecureEdge2Cloud is designed to help organizations simplify security while reducing the complexity of managing multiple point solutions. Built across the OSI 7 layers framework, the offering combines the power of the Zero Trust Exchange with Coforge's deep expertise in cloud transformation, AI, cybersecurity, and enterprise modernization.

The solution helps organizations:

- Modernize secure access for employees, contractors, partners, and third-party users
- Protect both managed and unmanaged devices across distributed environments
- Strengthen inline data protection across SaaS, web, and cloud applications
- Secure AI-powered applications, agents, and workflows
- Enable fast, secure access to private applications from any location
- Improve observability and proactively resolve application, network, and device issues
- Enhance visibility across business-critical systems and digital ecosystems
- Continuously optimize security posture as technology and business requirements evolve

Driving Simplicity, Visibility, and Resilience

SecureEdge2Cloud simplifies Zero Trust adoption by integrating advanced platform capabilities with implementation, modernization, managed security, and operational services. The solution enables consistent policy enforcement, improved visibility, and continuous optimization, helping organizations align security investments with evolving business objectives.

Sudhir Singh, CEO & Executive Director, Coforge, said, "Organizations today need a security strategy that can keep pace with the rapid adoption of cloud, AI, and distributed digital ecosystems. SecureEdge2Cloud reflects Coforge's AI-engineering approach, combined with our deep expertise in cybersecurity, cloud, and enterprise transformation. Together with Zscaler, we are helping organizations simplify complexity, strengthen resilience, protect critical assets, and unlock innovation with confidence in an increasingly AI-driven world."

Jay Chaudhry, CEO, Chairman & Founder, Zscaler, added, "Security should be an accelerator of business transformation, not a constraint. As organizations modernize their operations with cloud, AI, and connected ecosystems, they need a security architecture built for speed, scale, and resilience. Our collaboration with Coforge delivers exactly that—combining Zero Trust security with deep implementation expertise to help organizations reduce risk, protect critical assets, and unlock the full value of digital transformation."

A New Foundation for Enterprise Security

SecureEdge2Cloud represents a fundamental shift from fragmented, perimeter-based security models to a continuous, identity-centric Zero Trust framework. By embedding security across users, devices, applications, workloads, and data, it establishes a resilient foundation for long-term business growth and innovation.

As organizations continue to modernize through cloud, AI, and digital technologies, SecureEdge2Cloud enables them to stay ahead of emerging threats, strengthen compliance, improve operational resilience, and deliver secure experiences for employees, customers, and partners.

While SecureEdge2Cloud is designed for all industries, Coforge has already seen significant success in highly regulated and security-sensitive sectors, including Healthcare & Life Sciences, Financial Services, Insurance, and other enterprise environments where secure digital transformation is a strategic priority.

About Coforge

Coforge is an AI-native engineering services leader, where AI is the very foundation of how we design, build, and deliver intelligent solutions for our clients. We use AI and hyperspecialized industry expertise to engineer autonomous enterprises. We combine AI agents with our AI-enabled workforce, including specialized FDEs in hybrid pod-based delivery units. With a deep focus on trusted AI, our solutions are secure, governed, and enterprise-grade. We are outcome-led by design. Moving beyond AI experimentation, we deliver measurable business outcomes – lower operating costs, faster cycle times, higher conversion rates, and sustained margin growth.
