The Canadian Coast Guard Goes Live with Ramco Aviation Software

Inventory, procurement, repair and component maintenance now run on a single platform, with Phase 2 to extend it to aircraft maintenance planning and execution

Ottawa / Vancouver, CANADA — November 19, 2026 — Enterprise aviation software provider **Ramco Systems Canada Inc.**, a subsidiary of **Ramco Systems Limited**, announced that the Canadian Coast Guard's Aircraft Services Directorate (ASD) (formerly part of Transport Canada), a provider of federal aviation services to various government departments, has gone live on Ramco Aviation Software, completing the first phase of a transformation programme, bringing inventory, procurement, repair, and component and shop maintenance onto a single platform across every base.

The ASD set out to modernise and transform its maintenance and inventory operation in line with current technology standards, with the goals of equipping its employees with state-of-the-art maintenance and inventory management tools and providing its clients with service excellence, in full compliance with the Canadian Aviation Regulations.

As a result of Phase 1's completion, the ASD has achieved real-time inventory visibility across all of its 14 bases and vessels, coast to coast. Aircraft-on-ground demand planning is now completed electronically, and efficiencies are being realized as a result. Component maintenance routing is now tracked digitally, and tighter master data control has strengthened record-keeping accuracy. Together, these gains have improved turnaround times on the services the Aircraft Services Directorate provides to Canadian government entities.

Ramco Aviation Software also integrates with ASD's finance, training, human resources and reporting applications. Subsequent phases, covering aircraft maintenance planning and execution, is in progress; on completion, all aircraft maintenance and supply chain operations will be managed on a single system.

This initiative represents a pivotal step forward in how ASD supports their fleets and federal clients. By replacing legacy manual and siloed processes with an end-to-end digital ecosystem that tracks aircraft parts and components in real time, this will empower the ASD team with modern and integrated digital capabilities - optimizing productivity, streamlining maintenance workflows, and ensuring the highest standards of reliability and service excellence across all our operations.

Manoj Kumar Singh, Chief Customer Officer – Aviation, Aerospace & Defense, Ramco Systems, said, "Integrated, digital-first operations are now the standard in aviation maintenance, and the Aircraft Services Directorate's go-live shows what that looks like in practice. Having proudly served Canadian aviation for more than two decades, this milestone reflects our years of investment in building an AI-powered solution purpose-built for aviation maintenance and supply chain operations—ensuring that the right part is in the right place at the right time so the fleet stays ready. We look forward to supporting the Aircraft Services Directorate through the next phase of the programme."

Ramco Aviation Software is trusted by 24,000+ users to manage 4,000+ aircraft globally. With 90+ Aviation organizations onboard, Ramco is the solution of choice for top Airlines, 3rd party MROs, large Heli-Operators, leading Defense organizations, and major Urban Air Mobility companies around the world. Available on cloud, Ramco Aviation Suite provides accessibility with 'Anywhere Apps', significantly accelerating organizational efficiency and agility. Ramco is changing the paradigm of enterprise software with Artificial Intelligence based solutions, intelligent voice enabled user experience, and advanced features such as digital task cards, offline maintenance capability, conversational chatbots, HUBs and cognitive solutions.
