Aurionpro's Integro Lending Suite Named Category Leader Across Five Lending Technology Quadrants in Chartis 2026 Report

Recognition reinforces Aurionpro's leadership in delivering AI-native, end-to-end lending technology for the evolving financial services industry

Mumbai; August 28, 2026: Aurionpro Solutions (NSE: AURIONPRO | BSE: 532668), a leading provider of advanced technology solutions for the banking, payments, and fintech ecosystem, today announced that its Integro Lending Suite has been recognized as a **Category Leader** across all five evaluated quadrants in the **Chartis Credit Lending Operations Report 2026**. The Company received Category Leader recognition in **Loan Origination Systems, Loan Management Systems, Limits Management Systems, Collateral Management Systems, and Alternative Finance Systems**, underscoring the strength and breadth of its unified lending platform.

What sets Aurionpro apart is the completeness of its offering across every category evaluated by Chartis, an achievement that distinguishes the company in a market where many lending technology providers specialize in only one or two functions. As financial institutions accelerate their digital transformation, lending platforms that deliver operational agility, faster credit decisions, and enhanced customer experiences are becoming increasingly critical.

Commenting on the recognition, **Anish Shah, Research Principal, Chartis Research**, said: "Aurionpro's Category Leader position across all quadrants in our 2026 Credit Lending Operations report reflects its strong market momentum, comprehensive lending platform and innovation-led strategy. Combining end-to-end loan lifecycle management, advanced analytics and process automation, the solution also features an API-driven architecture to support diverse and complex lending operations, while leveraging cutting-edge technologies to drive operational efficiency and business growth."

Shekhar Mullatti, President - Banking Solutions Group, Aurionpro Solutions, added: "Category Leader recognition across all five Chartis

quadrants validates our long-term product vision. Global banks run the most complex credit operations in financial services: syndicated structures, multi-entity limits, diverse collateral, and deal lifecycles that span years. Aurionpro Integro Lending is engineered to handle that complexity natively using AI to reduce manual effort and improve credit decisioning accuracy."

Built on an API-first, AI-native architecture, the Integro Lending Suite offers purpose-built lending products across consumer, auto, mortgages, business banking, and corporate banking.

Each product features highly configurable user journeys tailored to the specific requirements of its segment. This allows financial institutions to modernise their lending operations, introducing agentic AI capabilities, while integrating seamlessly with existing banking systems. All the while, keeping the key tenets of a faster time-to-yes and unified credit and client experiences at its core.

Sanjay Varma, President – Fintech Solutions Group, Aurionpro Solutions, highlights this approach further: "Our solutions reflect what our clients tell us: in consumer and business lending, speed wins; we take this a step further by offering a powerful combination of speed and a quality experience. We deploy our solutions to deliver a faster time-to-yes with unified credit and customer experiences, all built to be bank-grade and at scale."

Our API-first, AI-native architecture enables agentic engagement with intuitive simplicity using persona-based flows, while keeping human oversight at every key decision point."

The suite's governance-first approach ensures that human oversight, explainable AI, and comprehensive audit trails combine to help financial

institutions strengthen risk management, enhance decision transparency, and meet evolving regulatory requirements.

About Aurionpro Solutions: Aurionpro Solutions Ltd. (BSE: 532668 | NSE: AURIONPRO) is a global enterprise technology leader pioneering intuitive-tech through deep-tech IPs and scalable products.
