MethodHub Partners with Datafoundry to Strengthen AI-Driven Pharmacovigilance (PV) and Pharma-Tech Offerings for Global Enterprises

The pace of transformation in the global manufacturing and life sciences industry has accelerated dramatically, driven by evolving customer expectations, regulatory intensity, and rapid advancements in digital technologies. Time is no longer a linear advantage; it is a competitive differentiator. Enterprises today must keep pace with this shift by embracing the principles of Industry 4.0, which demands the integration of intelligent systems, automation, data-driven insights, and agile operating models.

For organizations, especially in highly regulated sectors like pharmaceuticals, yesterday's requirements can no longer define today's boardroom agenda. Leaders are now expected to embrace the future, induce smart manufacturing tools, and enable intelligent decision-making frameworks that drive efficiency, compliance, and innovation. This transition is not optional, it is fundamental to sustaining growth, ensuring safety, and remaining globally competitive.

Reflecting this vision, Mr. Ahobilam, CEO and Executive Director of MethodHub Software Limited, emphasizes the company's alignment with Industry 4.0 imperatives. Under his leadership, MethodHub continues to strengthen its capabilities across intelligent platforms and AI-led services, serving 40+ global clients with a team of 500+ professionals across key international markets. With a strong fiscal growth trajectory and consistent investments in AI and life sciences, MethodHub is positioned at the intersection of technology, compliance, and next-generation enterprise transformation.

MethodHub Software Limited, a global AI-centric technology services company, today announced a strategic partnership with Datafoundry, a leading provider of purpose-built AI/ML SaaS solutions for pharmacovigilance and life sciences. This collaboration is aimed at delivering end-to-end, technology-led Pharmacovigilance (PV) and pharma-tech solutions to global pharmaceutical, biotech, and life sciences enterprises.

With increasing regulatory scrutiny, rising drug safety expectations, and the growing complexity of global clinical and post-market data, Pharmacovigilance has become a critical strategic function. Through this partnership, MethodHub and Datafoundry will combine their complementary strengths to help organizations transition from fragmented, manual PV processes to intelligent, automated, and scalable safety operations.

MethodHub will bring its strong capabilities in PV operations, regulatory compliance, and global delivery, while Datafoundry will contribute its advanced AI-powered solutions such as:

- **Safety AI:** End-to-end safety case management with intelligent automation, including case intake, triage, and compliance monitoring

- **Signal AI:** AI-driven signal detection and risk management with faster identification of safety signals and reduced false positives

- **Literature Monitor:** Automated global literature surveillance with AI-driven screening, extraction, and multilingual support

Together, these capabilities enable streamlined workflows, improved accuracy, faster turnaround times, and enhanced regulatory compliance aligned with global standards such as FDA and EMA guidelines.

MethodHub will continue to deliver comprehensive Pharmacovigilance services, including case processing, adverse event reporting, signal detection, aggregate reporting, audit readiness, and quality assurance. This will now be augmented by Datafoundry's AI platforms, enabling seamless integration of data, automation, and analytics into PV operations.

“Pharmacovigilance is no longer a back-office compliance function; it is central to patient safety and brand trust in the pharmaceutical industry. Through our partnership with Datafoundry, we are bringing together cutting-edge AI platforms, domain expertise, and scalable service delivery to help clients build future-ready, intelligent PV ecosystems,” said Mr. Ahobilam, CEO and Executive Director of MethodHub Software Limited.

As an added advantage, MethodHub also brings its proprietary AI-powered full-time hiring platform, QuantumHire, which supports clients in scaling specialized Pharmacovigilance talent efficiently. This further strengthens the ability to build high-quality PV teams alongside technology transformation initiatives.

MethodHub continues to expand its global delivery footprint across India and international markets, enabling seamless, round-the-clock support for pharmaceutical clients worldwide. Its strong focus on quality, compliance, and process excellence, backed by globally recognized certifications such as ISO 27001, ISO 9001, SOC 2 Type II, and HIPAA HITECH, positions it as a trusted partner for mission-critical pharma operations.

About MethodHub Software Limited

MethodHub is a publicly listed global technology services company that helps enterprises modernize, scale, and accelerate their digital transformation journeys. Serving 40+ clients worldwide with a team of 500+ professionals across the USA, India, Canada, and Thailand, MethodHub delivers high-impact services across Cloud Engineering, Data & AI, Cybersecurity, and ERP/CRM integration, with a growing focus on life sciences and Pharmacovigilance.

About Datafoundry

Datafoundry is a leading AI/ML-focused SaaS provider for pharmacovigilance and life sciences organizations. Its purpose-built platforms, including Safety AI, Signal AI, and Literature Monitor, enable automated safety case management, signal detection, and literature surveillance, helping enterprises achieve faster processing, improved accuracy, and global regulatory compliance at scale.
