Ahmedabad, India - May 30, 2026

**Taylormade Renewables Limited Announces FY 2025-26 Results
Execution Strengthens Across Renewable Energy and Industrial Sustainability Businesses**

Taylormade Renewables Limited (“TRL” or “the Company”) announced its audited standalone and consolidated financial results for the financial year ended March 31, 2026.

For FY26, the Company reported consolidated revenue from operations of ₹4,841.82 lakh and Profit After Tax (PAT) of ₹182.19 lakh.

The reported financial performance for the year was impacted by the Andhra Pradesh sales reversal adjustment undertaken during FY26. The Company believes this adjustment was important from a long-term financial discipline and reporting perspective and that it now presents a cleaner operational and accounting base going forward.

Despite this impact, TRL continued to make steady operational progress across renewable thermal energy, industrial wastewater treatment, sugar and distillery sustainability solutions, Zero Liquid Discharge (ZLD) systems, solvent recovery technologies, and Build-Own-Operate (BOO) infrastructure projects.

Several projects undertaken during the year involved infrastructure setup, technical integration, process validation, and phased execution cycles. Management believes a substantial portion of the operational work completed during FY26 is expected to progressively reflect in revenues and financial performance over the coming quarters.

The Company also continued strengthening its position in solar thermal applications aimed at reducing industrial LPG consumption and fuel costs across institutional kitchens, industrial heating systems, sugar and distillery process heating, and community cooking applications.

TRL believes increasing fuel costs, rising LPG dependency, growing environmental awareness, and the need for sustainable industrial operations are creating strong long-term opportunities across renewable thermal energy and industrial sustainability sectors.

The Company further continued expanding its offerings for the sugar and distillery industries through technologies related to spent wash concentration, wastewater recovery, renewable thermal integration, Zero Liquid Discharge (ZLD) systems, and enhanced sugar manufacturing efficiency.

Management Commentary

Mr. Dharmendra Sharad Gor, Chairman & Managing Director, stated:

“FY26 was an important year in strengthening the Company’s long-term foundation across renewable thermal energy, wastewater recovery, sugar sustainability solutions, and industrial infrastructure.

The reported financial performance for the year was impacted by the Andhra Pradesh sales reversal adjustment. However, with this legacy matter now behind us, we believe the Company is entering a much stronger and cleaner phase operationally.

Over the last several years, we have continuously worked on technology development, execution capabilities, infrastructure creation, and expanding our presence across multiple industrial sectors. Many of these efforts required time, patience, and continuous improvement before reaching meaningful commercial scale.

Today, we believe those efforts are beginning to translate into stronger opportunities, improving execution visibility, and growing acceptance of our technologies across industries.

We are also witnessing increasing opportunities across sugar and distillery sectors where industries are actively looking for solutions related to wastewater recovery, thermal efficiency, spent wash management, and sustainable process optimization.

At the same time, India's rising LPG dependency and increasing industrial fuel costs are creating significant opportunities for renewable thermal applications capable of reducing conventional fuel consumption across industrial heating systems, institutional kitchens, community cooking applications, and process industries.

Several ongoing projects are progressing toward advanced execution and commercial stages, and we expect the impact of the groundwork created over the last few years to become increasingly visible in the coming financial periods.

What started as a long-term vision to build practical and sustainable industrial solutions is now steadily taking shape through execution, industry participation, technology deployment, and expanding business opportunities.

With growing demand for fuel optimization, water recovery, renewable thermal applications, and sustainability-focused industrial infrastructure, we remain confident about the long-term direction of the business and the opportunities ahead for the Company."
