PRESS RELEASE

ACS Technologies Limited Strengthens Delivery Excellence with CMMI Level 3 Appraisal

Hyderabad, June 19, 2026: ACS Technologies Limited is pleased to announce that it has achieved CMMI Maturity Level 3 appraisal for the DEV and SVC domains, covering software development and Services.

CMMI, or Capability Maturity Model Integration, is a globally recognized framework for process improvement and organizational maturity. The **DEV** domain relates to development processes for products and services, while the **SVC** domain relates to the establishment, management, and delivery of services. The achievement of Level 3 reflects that the Company has defined and documented processes across relevant functions and follows a structured approach to execution, quality management, and continuous improvement.

This appraisal marks an important milestone in the Company's ongoing efforts to strengthen process discipline, operational consistency, and delivery governance. A mature process environment can support better project planning, improved coordination across teams, stronger quality controls, and more effective risk management, which are important in serving enterprise, government, and other demanding customer environments.

The appraisal may also enhance the Company's positioning in opportunities where process maturity, service reliability, and execution capability are important evaluation factors. By aligning its delivery framework with recognized quality standards, ACS Technologies Limited continues to reinforce its commitment to dependable execution, customer confidence, and sustainable long-term growth

Commenting on this achievement **Ashok Kumar Buddharaju, Chairman & Managing Director**, said: *"The CMMI Level 3 appraisal for the DEV and SVC domains is an important milestone for ACS Technologies Limited. It reflects the dedication of our teams in building disciplined, process-driven capabilities across software development and service delivery. This achievement strengthens our operational foundation and supports our ability to serve customers with greater consistency, quality, and execution focus. We believe it will further enhance stakeholder confidence and improve our readiness for larger and more complex opportunities in the future."*
