Subject: Intimation under Regulation 30 of Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015 (SEBI Listing Regulations) – Press Release

Dear Sir/Madam,

Pursuant to Regulation 30 of Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015 (SEBI Listing Regulations), we hereby attach the press release being issued by the Company titled **“RRP Defense Ltd and ESC BAZ Partner to Bring Next-Generation Diamond - Unique Surveillance Technology to India and Global Markets”** the contents of which are self-explanatory.

You are requested to take the same on your records.

Thanking You,

For RRP Defense Limited
(formally known as Euro Asia Exports Limited)

RRP Defense Ltd and ESC BAZ Partner to Bring Next-Generation Diamond - Unique Surveillance Technology to India and Global Markets

Exclusive India association positions RRP Defense to build a first-mover advantage in advanced AI-enabled observation technology

Mumbai, India (1st Sep 2026): RRP Defense Limited and **ESC BAZ**, a globally recognised developer of advanced electro-optical observation systems, have entered into an **exclusive association for India** to bring ESC BAZ's **Diamond - Unique Observation System** to the Indian market and explore opportunities across international markets.

The association combines ESC BAZ's advanced observation technology with RRP Defense's manufacturing and market capabilities, creating an opportunity to build a new business segment around intelligent surveillance and observation systems.

Why Diamond Matters

- **Daylight-quality imaging in complete darkness**, enabling continuous surveillance in demanding environments.
- **AI-powered detection and analytics** to support faster identification and response.
- Designed for **fixed as well as tactical deployment**, including masts, towers and rapidly repositionable applications.
- **80° field of view** with resolution of up to **4240 × 2832**.
- Designed for applications across **border security, defence installations, critical infrastructure, perimeter protection and tactical surveillance**.

A High-Value Market Opportunity

The opportunity comes at a time when demand for advanced electro-optical and infrared surveillance technologies is increasing globally.

- The global military **EO/IR market is estimated at approximately US\$11.1 billion in 2025**.
- India represents an estimated **US\$580 million opportunity** within the military EO/IR market.
- Diamond gives RRP Defense an opportunity to participate in a specialised, technology-intensive segment with applications across defence and security.
- Based on RRP Defense's current business assessment, **Diamond and the associated technology opportunity could contribute approximately 30% of the potential revenue opportunity within this emerging business segment**.

First-Mover Advantage in India

The association provides RRP Defense with the opportunity to establish an early position in a highly specialised surveillance technology segment.

- **Advanced observation capability:** Diamond addresses the growing requirement for intelligent surveillance in low-light and complete-darkness environments.
- **Technology differentiation:** AI-enabled observation and analytics create capabilities beyond conventional surveillance systems.
- **Early market positioning:** The association provides RRP Defense with a potential **first-mover advantage** in establishing this specialised technology offering in India.
- **Scalable opportunity:** The technology has potential applications across defence, homeland security, critical infrastructure and other high-security environments.
- **Global potential:** The platform can support RRP Defense's ambition to manufacture in India and address selected international markets.

From Make in India to Make in India, Sell to the World

For RRP Defense, the opportunity goes beyond importing or distributing a technology.

The objective is to create a platform that can progressively support **manufacturing, localisation, deployment and international market expansion from India.**

The association is designed to create value for both organisations—bringing ESC BAZ's technology capabilities and international experience together with RRP Defense's manufacturing and market reach.

“This association is not simply about adding another product to our portfolio. Diamond represents an opportunity to enter a highly specialised technology segment with significant applications across defence and security. Our objective is to build in India, create a strong market position and ultimately take these capabilities to global markets. We believe this can give RRP Defense an important first-mover advantage while creating a commercially sustainable opportunity for both organisations.”

Surveillance Is Becoming a Necessity, Not a Luxury

As **geopolitical tensions and security challenges intensify across regions**, continuous surveillance and situational awareness are becoming increasingly critical. The ability to detect and monitor threats in darkness can be particularly important for:

- Border and perimeter surveillance
- Defence and military installations
- Critical infrastructure
- Strategic industrial facilities
- Tactical security operations
- High-value and sensitive assets

Diamond is positioned to address these requirements through a combination of **advanced imaging, AI-powered analytics and flexible deployment.**

Diamond — A Daylight Image in Darkness.

About RRP Defense Limited

RRP Defense Limited is part of the RRP Group and is focused on developing and manufacturing advanced defence technologies across electro-optics, thermal imaging, unmanned systems and other strategic capabilities. The company combines indigenous manufacturing with global technology partnerships to strengthen India's defence ecosystem and develop solutions for domestic and international markets.

About ESC BAZ

ESC BAZ is a developer of advanced electro-optical observation and surveillance systems for defence and security applications. Its technologies combine advanced imaging, intelligent processing and flexible deployment architectures for demanding operational environments.
