Kellton Chosen to Build Enterprise Loan Integration Platform for a Leading Automotive Finance Company

The engagement demonstrates Kellton's financial services expertise across lending technology, enterprise integration, platform engineering, and AI-ready modernization.

Hyderabad, September 15, 2026 : Kellton, an AI-led digital transformation and enterprise technology consulting company, has been chosen by a leading automotive finance company to design and build an enterprise loan integration platform, creating a scalable and governed integration foundation for its lending ecosystem.

Built as the lender's integration foundation, the platform will connect its origination, customer management, credit assessment, and servicing systems with external verification and financial data providers through a single governed layer, underpinning applicant verification, credit assessment, eligibility decisioning, and customer record synchronisation, while reducing integration complexity across the lending ecosystem.

Designed as a reusable framework rather than a fixed set of connections, the platform will allow new providers, channels, and product lines to be onboarded onto the same foundation as the business scales, with the security, auditability, and transaction integrity required in a regulated environment. By establishing a governed, consistent flow of data across the lending value chain, it also creates the foundation for automation and AI-led decisioning. For Kellton, the engagement reinforces its expertise in building secure, scalable integration foundations for complex, regulated environments, where connected and governed systems are critical to enabling automation, analytics, and AI-led transformation.

Karanjit Singh, CEO APAC, Kellton, said:

"As financial services move from digitisation towards more connected and intelligent ecosystems, the ability to integrate systems, data and partners seamlessly is becoming increasingly critical. This engagement reflects the kind of complex integration challenges we are well equipped to address, bringing together our platform engineering and financial services expertise to build a scalable, governed foundation that can evolve with the business. Getting this foundation right is also critical to creating the trusted flow of data needed to advance automation, analytics, and AI-led decisioning over time."

About Kellton

Kellton is an AI-led digital transformation and technology consulting company with global delivery capabilities. The company partners with enterprises to build scalable digital platforms, modernize operations, and accelerate intelligent automation journeys. With over 2,000 professionals across North America, Europe, the Middle East, and Asia, Kellton delivers solutions across cloud, data, AI, enterprise platforms, and digital product engineering.
